

Getting Started Questionnaire

1. In what context will the measure set be used?

- a. Type of program (e.g., Medicaid managed care program, ACO, PCMH, etc.)

- b. Population served by or a focus of the program (e.g., children, adults with diabetes, commercially insured vs. Medicaid)

2. How will the measure set be used?

- a. Entity to be assessed with the measure set (e.g., MCOs, primary care practices, behavioral health providers)

- b. Purpose of the measure set (e.g., incentives, public reporting, general monitoring, evaluation, contract compliance)

- c. Conditions or services of special measurement interest (e.g., asthma, depression, primary care, preventive care, chronic illness care)

- f. Have you considered to what extent your draft measure set aligns with other measure sets required of providers participating in your program (e.g., state-based, federal, commercial insurer, etc.)? If so, do you have a list/lists of these measures?

- g. What is the process for finalizing this measure set?

5. Have you defined criteria for measure selection? If so, what do they include?

- a. Have you considered alignment with other measure sets as a potential criterion?

6. Have you established a process for measure selection?

- a. Which stakeholders are involved?

- b. What are the interests and concerns of key stakeholders?

- c. What is your targeted timeline for completion?

- d. What will be the process for review and approval?

7. Which of the following data sources are available for measure generation?

- a. Claims data

- b. Clinical data
 - i. Chart review data

 - ii. EHR-based data

- c. Patient survey data (specify available surveys)

- d. Administrative performance data (e.g., telephone answer time)
